| Project acronym: SUSTAINair | Project Number: 101006952 |
| Start date of project: 1 January 2021 | Project duration: 42 months (June 2024) |

PUBLISHABLE SUMMARY

The purpose of the D7.2 “Data management plan – Draft” is to identify the project’s research data and to describe how to make them findable, accessible, interoperable and re-usable (FAIR).

All partners involved in research activities were asked to provide detailed information about the

- Data collected / processed prior to project start (**Background**), and
- Data generated during the entire project (**Results**).

This information is summarised in tabular form in the document D7.2.

The document will be updated at later stages as needed. The DMP will be updated at least periodically, or when necessary (new datasets, significant changes, etc). Indeed, the DMP of the SUSTAINair project is intended to be a living document in which information can be made available on a finer level of granularity / accuracy through updates as the implementation of the project progresses and when significant changes occur.
